

UX Designer focused on creating experiences that bring excitement to users, give value to customers, and provide stakeholders confidence in a robust product, prioritizing user advocacy and user-centered practices.

**Rolner Alliance Jr**

**Senior UX Designer**

## **Opportunities**

**Nov 2021 - Feb 2023**

**ADP (Automatic Data Processing, Inc)**

Alpharetta, GA

### **Senior UX Designer**

As a Senior UX Designer on the Core HR product team, I worked with UX professionals, designers and writers, to create new experiences for the profiles section of ADP's WFN platform. This work evolved into a supplementary design guidance document. The goal of the design document is to create and highlight shared patterns across all profiles in all of ADP's platforms so that they could one day have the same look and feel, and reinforce those patterns for consistent expectations.

**Jun 2019 - Nov 2021**

**Urjanet**

Atlanta, GA

### **Senior UX Designer**

For the first year, I worked under a lead UX Designer working to create design and experience for Connect. After the first, I took on more senior responsibilities being the only UX Designer on the team, including the desktop application Console. This includes: designing new POCs, improving our design system, and working closer with our engineering team.

**Jun 2018 - April 2019**

**MoviePass**

New York, NY

### **UX Designer**

As a UX designer on the product team, I worked side-by-side with senior UX designers researching, brainstorming, and designing solutions for the flagship mobile applications. I also took on the role of conducting light user research as well as proctoring user testing sessions. Additionally, I independently designed an internal customer service portal.

**Aug 2017 - Jun 2018**

**Redzone Inc**

Miami, FL

### **Junior UX Designer**

I worked under the direction of the director of product. I designed experiences for the RedZone navigation mobile application. My design responsibilities were to create mockups and design specs as deliverables that prescribe the solution and the expected frontend deliverable.
